

SITUATION

CHARACTERISTICS

- **LIGHT BROWN IRON STAINS**
- Light in colour (similar to weak tea)
- Very common in fibreglass pools
- Causes can include addition of pool salt, and extended use of Liquid Chlorine.
- High pH is another common factor

RECOMMENDATIONS

IRON STAIN REMOVER

Guaranteed results when used on iron stains. Will not alter water balance. Results in minutes.

SALT STAIN CLEAN

Economical yet very effective. Works particularly well in fibreglass pools.

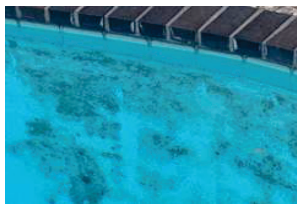

- **DARK BROWN (Manganese)**
- Darker appearance to iron staining
- Takes 5-7 days to remove
- Can be quite stubborn
- Caused usually by poor quality pool salt and high pH

IRON STAIN REMOVER

Widely effective against Manganese Stains but results not usually seen for 5-7 days

MULTI STAIN REMOVER

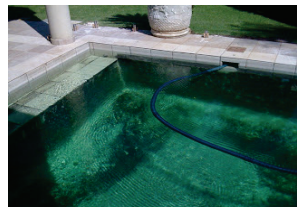

All purpose stain remover that works well against Manganese among other stains

- **COPPER STAINING (Oxide)**
- Usually black in appearance when copper oxide is formed
- Causes include inferior chemicals such as copper algicide and calcium based chlorine
- Degraded heater elements

CU LATER PARTS I & II

New formulation two part pack designed specifically to remove copper stains from swimming pool surfaces. Used in conjunction the two part process will remove most copper stains from all pool surfaces.

- **COPPER STAINING... cont'd**
- Copper stains can also appear as a green / black stain as pictured
- This is usually caused by excess copper due to use of Ionised systems, degraded heater elements or over use of copper products

STAIN & SCALE ATTACK I & II

Organic acid blend which is not only great for removing scale but ideal for copper stains in most pools.

MULTI STAIN REMOVER

All purpose stain remover that works well against Manganese among other stains

- **OSMOSIS (Black Spots)**
- Osmosis appears when water passes through the membrane and forms a bubble which has a black tear drop appearance
- Not to be confused with Black Spot Algae
- Only appears in fibreglass pools

SPOT-AWAY

Spot-Away is specifically designed to reverse the Osmosis process and remove the black staining that is caused by it. Spot-Away will never remove the bubble caused by Osmosis but it will remove the black appearance which causes it to stand out. Very effective against other metal stains and organic stains Spot-Away can be used for other applications.

- **CALCIUM SCALE**
- Calcium scale can appear as either spots / legions on the pool surface or as a calcium sheen over the entire pool surface.
- Very difficult to treat and very difficult to prevent

STAIN & SCALE ATTACK I & II

Formulation designed specifically for the removal of calcium legions from swimming surfaces

STAIN & SCALE DEFENCE

Anionic dispersant which is designed to prevent the reoccurrence of calcium scale and build up

- **ORGANIC STAINS**
- Usually introduced by environmental factors such as leaves, algae, plant matter and tannins.
- Often mistaken for mineral stains and will not always react the way a metal stain does

IRON STAIN REMOVER

Very effective against Tannin staining. Predominantly occurs when gum trees are in abundance

MULTI STAIN REMOVER

All purpose stain remover that works well against Organic stains and all metals stains

- **RUST STAINS**
- Rust stains usually develop if incorrect materials have been used in the pool, works are carried out around the pool or something is left sitting on the pool surface

MULTI STAIN REMOVER

The rust needs to be caught early as rust sets in very quickly and in a matter of days it is very difficult to remove

ERASE IT by LO-CHOR

Highly effective abrasive material for removing rust spots
